

SIR'S,

THANK YOU FOR YOUR TIME.

I am not only an Amateur operator, But A M.A.R.S. Memeber as well.

I feel that BPL Is a Major headache waiting to happen !

I live in the City and Have power lines VERY CLOSE to my antennas.

even the ones that are enclosed with in the house it's self.

If these things are allowed to radiate RF at the levels suggested,

How will I be able to conduct my communications work with ARMY

MARS ?? To say nothing of HAM RADIO ...

This matter concerns me greatly for these reasons.

If they are allowed to start up with BPL, And I can't copy the

signals I need to hear over their NOISE, I WILL file a complaint!

The security and saftey of our nation is to IMPORTANT to consider

MONEY over the communications infrastructure that BPL COULD EAISLY

DISRUPT. I ask you to reconsider this issue Before it's too late.

Please know that I mean NO disrepect, But I do think that with BPL,

There is a big problem ahead, We have a tough enough time just

keeping power line noise down even to a dull roar.

I ask that you prevent more problems by rejecting BPL IN ANY FORM,

If it radiates five feet from the lines it's too far.

Especially where I live.

THANK YOU AGAIN FOR YOUR TIME.

Respectfully

William F. Green Jr.
